

HTI Introduces HydroPack

October 2, 2009

SELF HYDRATING WATER FILTER PACKS

The Simplest Way to Prepare For Water Emergencies.

The HydroPack is a one-time-use emergency hydration pouch. Each 12 oz pouch is pre-filled with a flavored osmotic agent which, when fully hydrated, becomes an electrolyte enriched drink.

In independent laboratory tests, the HydroPack filter meets or surpasses bacteria, virus and parasite reductions as specified by the EPA for water purifiers.

How It Works:

Simply place the pouch in any water source and it will self hydrate. The pouch itself is the forward osmosis membrane filter that allows the pouch to draw in water and reject even the harshest contaminants. The pouch will hydrate in approximately 12 hours. Once hydrated, insert a straw through the pouch or simply cut the corner off to consume.

We expect to see the HTI HydroPacks embraced more and more by hospitals, as well as private citizens, in the event of natural disasters or other emergencies where survival depends on having clean, safe drinking water.

HydroPacks can be ordered online or by calling toll free at 888-420-7222.
