

HYDROWELL

You See A Puddle. It Sees Potential.

ANYWATER ANYWHERE®

HydroWell®

30 Liters per Day from Virtually Any Water Source

The HydroWell provides up to 8 gal (30 L) per day of clean drink from nearly any surface water source. Unlike every other water filtration technology, the HydroWell will never clog due to its unique forward osmosis filter. Use nearly any water source to generate clear drink. In independent laboratory tests, the HydroWell filter meets or surpasses reductions for bacteria, viruses, and cysts as specified by the EPA for water purifiers.

HOW IT WORKS:

The osmotic filter is built into a standard water can cap, and sets up in minutes for either stationary or vehicle-mounted operation. Just fill one can with dirty water to be filtered, plug one sports syrup pouch into the cap, and the HydroWell will immediately start pumping clean drink.

There are no purifying chemicals required, nor is any power input needed other than the sports drink syrup charges that drive the filtration process by osmosis. One syrup pouch will filter one 5.3 gal (20 L) can of water, providing a better than 35x advantage compared to transporting water and greatly reducing the amount of water you must transport to remote areas. Reliable, safe and hassle-free water filtration.

BENEFITS:

- The highest purity levels of any personal water filter
- Non-clogging filter means expanded water source options
- Dilute sports drink enhances hydration and improves user performance
- Reduces your water logistics burden by a factor of 35+

SYSTEM SPECIFICATIONS:

Volume: Uses a 5.3 gal (20 L) water can
 Filter Life: 30-90 days
 User Effort: seconds to fill, no work required for filtering

Charges per day at 20°C:	1	2	3
Liters per day:	16	24	30
Avg. liters per hour:	0.7	1.0	1.2
Liters per charge:	16	12	10
Volume multiplier:	39	29	24
