## HydroPack™

### *Self Hydrating Water Filter Pouch*

### *The Simplest Way to Prepare For Water Emergencies*

The HydroPack is a one-time-use emergency hydration pouch. Each 12 fl. oz (355 ml) pouch is pre-filled with a flavored osmotic agent which, when fully hydrated, becomes an electrolyte enriched drink.

In independent laboratory tests, the HydroPack filters meet or surpass reductions for bacteria, viruses, and cysts as specified by the EPA for water purifiers.

### **HOW IT WORKS:**

Simply place the pouch in any water source and it will self hydrate. The pouch itself is the forward osmosis membrane filter that allows the pouch to draw in water and reject even the harshest contaminants. The pouch will hydrate in approximately 10 hours. Once hydrated, insert a straw through the pouch or simply cut the corner off to consume.

### **BENEFITS:**

- The highest purity levels of any personal water filter
- Non-clogging filter means expanded water source options
- Dilute sports drink enhances hydration and improves user performance

### **SYSTEM SPECIFICATIONS:**

Volume:	12-17 fl. oz. (355-500 ml)
Filter Life:	one time use
Filter Output:	12 fl. oz (355 ml) in 10-12 hours at 68°F (20°C)
User Effort:	Place the pouch in water; no work required for filtering.
Shelf life:	5 years
Available in:	6 pack re-sealable pouch 108 pouch bucket 402 bulk (67 packs of 6)
